Subject:
GEOGARD™ EPDM membranes - PFAS

Dears,

Based on our knowledge of the manufacturing process and on the available information of our suppliers, we confirm that per- and polyfluoroalkyl substances (PFAS)¹ are not intentionally added to our EPDM membranes.

Holcim Solutions and Products EMEA continues to work with its upstream supply chain to identify potential PFAS content in products placed on the market and will continue to inform its customers proactively.

We will comply with any regulatory requirements affecting PFAS substances in the future.

We remain available for any further question you may have.

Best regards,

gm18122025
